

Capsule has an incomplete fix of CVE-2026-22872: TenantResource RawItems and Generators still allow cluster-scoped resource creation (cross-tenant privilege escalation)

Report Type: Weekly · Generated: July 31, 2026 17:58 UTC · Coverage: Jul 31 - Jul 31, 2026

1 Total Advisories	0 Critical	0 High	1 Medium
MEDIUM Severity	6.6 CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Summary CVE-2026-22872 (GHSA-qjjm-7j9w-pw72) reported that a Tenant Owner could create cluster-scoped resources (e.g. `ClusterRole`, `ValidatingWebhookConfiguration`) through a `TenantResource`, because the controller applies them with its cluster-admin ServiceAccount and `SetNamespace` is ineffective for cluster-scoped kinds. The v0.13.0 fix added a cluster-scope rejection guard, but **only on the NamespacedItems selection path** (`ResourceReference.LoadResources` -> `IsNamespacedGVK`, error `"cluster-scoped kind ... is not allowed"`). The **RawItems create path** — the exact vector the original advisory named — and the Generators path were not given this guard. The vulnerability therefore persists in all releases **v0.13.0 through v0.13.7** and on trunk HEAD (`8d89d6865d`). ### Details TenantResource reconcile flow: - `internal/controllers/resources/namespaced.go` `reconcile()` obtains the apply client via `loadClient()`; by default (impersonation off, no `Spec.ServiceAccount`)

Refer to the official NVD entry and vendor advisory for the complete list of affected products and versions for CVE-2026-22872.

Vulnerability Context & Attack Surface

Remote code execution vulnerabilities allow attackers to execute arbitrary operating system commands in the context of the application server process. Successful exploitation typically results in full server compromise, lateral movement, and persistent backdoor installation. Internet-facing applications are prioritized for exploitation - median time from PoC publication to in-the-wild exploitation is 3-14 days.

MITRE ATT&CK® v15 Mapping

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: `GET /api/v1/intell/iocs?advisory={id}`. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield Capsule has an incomplete fix of CVE instances exposed to the internet.
3. Enable verbose access logging on all Capsule has an incomplete fix of CVE endpoints immediately.

- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for CVE-2026-22872 or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$150K - \$900K Breach Cost Range (FAIR)	\$380K IBM Cost of Breach 2025 Median	\$120K/day Business Interruption Cost	\$85K Regulatory Fine Exposure
---	--	--	---

Medium severity events require internal investigation and targeted customer notification. Average cost includes 340 hours of engineering time.

Remediation Cost Estimate: \$55K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
PCI-DSS v4.0	Req. 6.3.3	Non-critical patches applied within 3 months
NIST CSF 2.0	ID.RA / PR.PS	Vulnerability assessment and platform security policies
ISO 27001:2022	A.8.8	Vulnerability management programme with documented remediation timelines

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Monitor Capsule has an incomplete fix of CVE-2026-22872: TenantResource RawItems and Generators still allow cluster-scoped resource creation (cross-tenant privilege escalation) for escalation.
2. Apply patches in next maintenance window.
3. Apply vendor patch for Capsule has an incomplete fix of CVE-2026-22872: TenantResource RawItems and Generators still allow cluster-scoped resource creation (cross-tenant privilege escalation) immediately - check NVD for official fix guidance.
4. Enable enhanced logging and alerting on all systems running affected software versions.
5. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
6. Audit all internet-facing instances of affected products and confirm patch deployment.
7. Conduct a threat hunt using MITRE ATT&CK techniques mapped in this advisory.
