

Winter: Authenticated Twig sandbox escape in CMS SecurityPolicy (bypass of CVE-2024-54149)

Report Type: Weekly · Generated: August 20, 2026 21:34 UTC · Coverage: Aug 20 - Aug 20, 2026

1 Total Advisories	0 Critical	1 High	0 Medium
HIGH Severity	N/A CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Impact Affected versions of Winter CMS allow authenticated backend users with CMS template-editing permissions to escape the Twig sandbox ("safe mode") that is meant to restrict what template code can do. Using any of the following permissions, an attacker can read and modify arbitrary database records, execute arbitrary SQL (including DDL such as `DROP TABLE`), exfiltrate sensitive data such as backend administrator credentials, and achieve remote code execution by injecting PHP into a CMS page, layout, or partial code section: - `**cms.manage_pages**` - `**cms.manage_layouts**` - `**cms.manage_partials**` This is an incomplete-fix follow-up to CVE-2024-54149 (GHSA-xhw3-4j3m-hq53). That fix added a blocklist of dangerous methods to `System\Twig\SecurityPolicy`, but the blocklist missed a large number of equivalent methods and did not account for the way Eloquent models forward calls to the query builder. As a result the sandbox could be bypassed through — among others — `saveQu`

CVE / Advisory ID	CVE-2024-54149
Vulnerability Class	Unclassified Security Vulnerability
CWE Reference	Pending NVD enrichment
Actor Attribution	CDB-UNATTR-CVE
Source Advisory	NVD / Vendor Advisory

Refer to the official NVD entry and vendor advisory for the complete list of affected products and versions for CVE-2024-54149.

Vulnerability Context & Attack Surface

This vulnerability affects the security boundary of the target component. Successful exploitation may allow unauthorized access, data disclosure, or denial of service depending on deployment configuration. Consult the NVD entry and vendor advisory for full technical root cause analysis and CVSS vector breakdown.

MITRE ATT&CK® v15 Mapping

Technique density score: 0.0 · Techniques observed: 0 · Tactics covered: 0

MITRE ATT&CK techniques pending analyst enrichment. Deploy detection rules from Section 6 to identify related activity.

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intel/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield Winter: Authenticated Twig sandbox escape in CMS SecurityPolicy (bypass of CVE instances exposed to the internet.

- 3. Enable verbose access logging on all Winter: Authenticated Twig sandbox escape in CMS SecurityPolicy (bypass of CVE endpoints immediately).
- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for CVE-2024-54149 or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$800K - \$4.5M Breach Cost Range (FAIR)	\$1.8M IBM Cost of Breach 2025 Median	\$450K/day Business Interruption Cost	\$320K Regulatory Fine Exposure
--	---	---	---

High severity incidents activate IR retainers, forensic investigation (avg 47 days), and reputational damage impacting 12-18% of revenue.

Remediation Cost Estimate: \$180K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
GDPR	Art. 32 / Art. 33	Appropriate technical measures; notify DPA if personal data affected
PCI-DSS v4.0	Req. 6.3.3	Patches within 1 month; documented risk acceptance if deferred

Framework	Reference	Obligation
NIS2 Directive	Art. 21	Risk management measures including vulnerability handling policies
NIST CSF 2.0	RS.MI / RC.RP	Incident mitigation and recovery planning; post-incident review

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Apply patches immediately for Winter: Authenticated Twig sandbox escape in CMS SecurityPolicy (bypass of CVE-2024-54149).
2. Enable enhanced monitoring for related IOCs.
3. Review SIEM rules for associated MITRE ATT&CK techniques.
4. Apply vendor patch for Winter: Authenticated Twig sandbox escape in CMS SecurityPolicy (bypass of CVE-2024-54149) immediately - check NVD for official fix guidance.
5. Enable enhanced logging and alerting on all systems running affected software versions.
6. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
7. Audit all internet-facing instances of affected products and confirm patch deployment.
